HTML CSS SQL Vue.js PHP Git React

JAKE ARMOUR

WEB DEVELOPER

INTRO —

After discovering my passion for web development thanks to my dad, I could not get enough. With an amateur portfolio containing websites for previous jobs, I converted this to a full-time development role after graduating from university with my master's degree. I now work with full-stack technologies including PHP, Laravel, Vue. js, GraphQL, Quasar and more.

EXPERIENCE

GRADUATE WEB SOFTWARE DEVELOPER

2019 - Present | CGG

Crawley, UK

Joined a small team dedicated to developing the company's internal sites. Worked with full-stack systems to develop functional web pages to be used by thousands of employees.

- Communicated efficiently between Crawley and the management in Singapore, allowing smoother runs through projects as well as detailed updates.
- Spearheaded the frontend design of a new website, including making important decisions along the way.
 Demonstrating the value of a frontend framework over pure HTML.
- Researched the best software to use as a central wiki to upgrade from the old 2005 installation. Now used by thousands of employees and has allowed these employees to access relevant information quicker and more effectively.
- Redesigned pages to streamline access to relevant information. This included CSS changes as well as content changes.

IT ASSISTANT

2015 - Present | Jungleland Telford

Telford, Uk

Responsible for all design and maintenance of the website. Working to increase web presence and traffic to the website by making it a better source for information. Interacting often with management to come up with the best solution to their needs.

- Designed and developed a user-friendly website, increasing web traffic and allowing for the website to be used as a central hub bringing it in line with other competitors.
- Created a booking system allowing the company to reopen and manage capacity safely during the COVID-19 pandemic and allowing over 3000 families to revisit the soft-play center.
- · Made the decision to move the website to a framework, significantly improving functionality and speed of the website.

IT WEB TECHNICIAN

2016 - 2017 | The British School of Brussels

Tervuren, Belgium

Provided first line support to both students and teachers. Worked mainly on the internal administration system to develop new modules and streamline general use.

- Reduced complexity of bus route registers by converting paper registers into a new module inside the administration system, increasing available time for both teachers and coordinators.
- · Reduced response time of support tickets by creating a web application to alert technicians of new tickets.
- Allowed the school to conform to GDPR regulations by creating an application for security to use after their administration system access had to be revoked.

EDUCATION—

2019 MASTERS DEGREE 2018 Pass with Distinction
